

ELECTRIFY YOUR HOME

Who is eligible?

Electrify Your Home is a CCCE partnership with TECH Clean California that provides cash incentives to contractors for qualifying heat pump projects in the CCCE service area. Cash incentives are available when switching gas-powered water heaters and HVAC equipment to all-electric versions.

Why electrify?

For Residents

- Going electric reduces regional greenhouse gas (GHG) emissions that come from natural gas and propane and reduces the reliance on gas.
- Homes without gas are safer and healthier. A home with all-electric appliances saves 2.5 metric tons of carbon a year, equivalent to taking one car off the road for an entire year.

For Contractors

- Enroll to access incentives and get your business listed in TECH Clean California's "Find A Contractor" database
- Access free, high-quality workforce education and training to learn how to install the latest heat pump technology safely for residential clients
- Access supply chain engagement to increase inventory and selection of appliances carried by local distributors. Access streamlined permitting and financial resources for large projects

When are program incentives available?

- Contractors must first enroll in the TECH Clean California program before applying for incentives. Find a licensed contractor or ask your local contractor to sign up for TECH Clean California's program to access these cash incentives.
- Receive up to \$6,800 for Heat Pump Water Heater or up to \$6,500 for Heat Pump HVAC equipment and installation
